

#### medical clearance guidelines

Effective 04 February 2016

#### Part 1 - Medical Clearance Guest's Letter

Dear Guest.

Virgin Australia is committed to ensuring that your flight with us is as safe and comfortable as possible.

You should be aware that flying can cause complications for guests with certain medical conditions. Virgin Australia employees are not medically trained and can only provide limited assistance in the event of a medical emergency. It is for this reason that Virgin Australia provides *Medical Clearance Guidelines* (VAGP-MED-01) to assist guests and their treating doctor to understand some of the risks associated with air travel.

When making a booking, you must inform Virgin Australia that you have a medical condition. We ask you to consult your doctor to find out whether it is safe for you to fly. You must provide your doctor with a copy of the *Medical Clearance Guidelines* (VAGP-MED-01) including the Medical Clearance Doctor's Letter and Medical Clearance Form. These must be completed by your treating doctor on determination that it is safe for you to travel. Any assessment or appointment with your treating doctor is at your expense.

It is important that you bring a copy of Part 3 - *Medical Clearance Form* for each of your intended flights with Virgin Australia.

Photocopied or fax copies of the form are acceptable provided the information can be clearly read.

In providing this completed form to Virgin Australia you are waiving the confidentiality of this information disclosed by your doctor. Virgin Australia may disclose the information on this form to any other carrier associated with your ticket. However, Virgin Australia will not disclose the information on this form to any other third party without your permission, or unless it is required by law.

Virgin Australia reserves the right to deny boarding if you have not obtained medical clearance or if we consider that it is not in your best interests to fly.

Please forward the completed forms:

Email: VA.Medical@virginaustralia.com

Fax: +61 7 3295 3100

For urgent, complicated medical cases or any queries in relation to completion of the Part 3 - *Medical Clearance Form*, please contact the Guest Contact Centre on the following numbers:

Within Australia 1300 139 303 Anywhere else in the world + 61 7 3295 3941

Thank you, Medical Services

Virgin Australia

#### medical clearance guidelines

Effective 04 February 2016

#### Part 2 - Guidelines to be referred to by medical practitioner

These guidelines must be used in conjunction with the Virgin Australia *Medical Clearance Form* (Part 3). In addition to these guidelines, when considering a passenger's suitability for air travel, the following must be considered:

- Reduced atmospheric pressure. Cabin air pressure changes greatly during 15-30 minutes after take-off and before landing; gas expansion and contraction can cause pain and pressure effects.
- Reduced oxygen tension. Cabin air pressure is equivalent to an altitude of 6000 to 8000 ft and oxygen partial pressure is approximately 20% less than at sea level.

Use this form to determine if a passenger's medical condition makes them Unacceptable for Travel or if Medical Clearance required before travel. If Medical Clearance is required before travel, the Part 3 - *Medical Clearance Form* **must** be completed by a medical practitioner (registered doctor).

NOTE: Any medical condition which would render a passenger unable to complete the flight safely, without requiring extraordinary medical assistance during the flight, is considered unacceptable for air travel.

This is not an exhaustive list of conditions. If a person has had recent surgery or suffers from an ailment not specified in the table below that may affect their health, they should consult a medical practitioner for travel advice and medical clearance.

#### <u>Virgin Australia will consider a passenger's medical condition on a case by case basis however absolute</u> contradictions to flying are:

- 1. Within 24 hours of a general anaesthetic
- 2. Uncontrolled bleeding
- 3. Unstable medical or psychiatric conditions
- 4. Uncontrolled Pain
- 5. Known ectopic pregnancy
- 6. Decompression Illness
- 7. Active Tuberculosis or Haemorrhagic Fever

| CODE/<br>MEDICAL CONDITION   | UNACCEPTABLE<br>FOR TRAVEL   | MEDICAL CLEARANCE<br>REQUIRED                | COMMENTS   |  |  |  |  |
|--|--|--|--|--|--|--|--|
| CATEGORY 1 - CARDIOVASCULAR AND CIRCULATORY CONDITIONS   |  |  |  |  |  |  |  |
| (1A) Heart attack (myocardial infarction)  LOW RISK- less than 3 days MEDIUM RISK- less than 10 days HIGH RISK- until stable (see below) |  | Within 3-21 days (see below)                 | Unacceptable for travel if supplemental oxygen is required. Wheelchair assistance to limit ambulation may be necessary   |  |  |  |  |
|  | As per British Cardiovascular Society Guidelines, stratify according to risk:  High risk = EF<40% with signs and symptoms of heart failure or requiring further investigation/revascularization or device therapy- > must be discussed with Guest Contact Centre Team and travel delayed until stable  Moderate risk = no evidence heart failure or inducible ischaemia or arrhythmia, EF>40% -> delay travel ≥10d  Low risk = 1st cardiac event, age<65, successful reperfusion, EF>45%, uncomplicated and no further investigations or interventions planned-> may fly ≥3days. |  |  |  |  |  |  |
| (1B) Angina  | Unstable angina (angina which despite treatment has increased in frequency and severity)   | Not required if the condition is controlled* | Supplemental oxygen should not be required to control the angina at rest  * *must be able to walk at least 50m and carry out other Activities of Daily Living (ADLs) without or breathlessness |  |  |  |  |

Effective 04 February 2016

| CODE/<br>MEDICAL CONDITION   | UNACCEPTABLE FOR TRAVEL  | MEDICAL CLEARANCE<br>REQUIRED  | COMMENTS   |  |
|--|--|--|--|--|
| (1C) Significant cardiac arrhythmia  | Within 7 days or unstable arrhythmia   | Within 8-21 days   | Does not include arrhythmias considered by the treating medical practitioner to be benign  |  |
| (1D) Heart failure (congestive cardiac failure)  | If uncontrolled, requiring supplemental oxygen at rest or if there is significant pulmonary oedema | Not required if the condition is controlled *  | * must be able to walk at least<br>50m and carry out other Activities<br>of Daily Living (ADLs) without or<br>breathlessness   |  |
| (1E) Cardiac surgery - where the chest cavity is opened  | Within 7 days  | Within 21 days and must be provided by the treating surgeon  | In assessing fitness to fly, the treating surgeon (not a surrogate or trainee) must, in addition to any other assessment, view a chest X-ray to confirm that there is no air in the plural space and indicate this confirmation on MED-01 Part 3                 |  |
| (1F) Cardiac angiography (Heart - coronary artery X-rays)  | Within 24 hours  | Within 7 days  | A heart attack (myocardial infarction) within 21 days overrides these provisions   |  |
| (1G) Cardiac angioplasty with or without stent insertion   | 2 days or less   | Within 7 days  |  |  |
| (1H) DVT (Deep Vein Thrombosis) or PE (Pulmonary Embolism). Also, significant predisposition to DVT/PE, including:  • Prior history of DVT/PE  • Significant family history  • Concurrent medical condition (e.g. fracture, injury, blood disorder, cancer) or use of medication, which predisposes to DVT | Within 5 days  | Within 6-21 days, provided stable on anti-coagulants   | Anti-coagulation stable or within therapeutic range if applicable; normal respiratory function   |  |
| (11) Pacemakers and internal (implanted) defibrillators  | Within 24 hours  | Within 72 hours of insertion or 24 hours of replacement of device                                      | Refer (1C) if not controlled by the device, may also apply and overrides these provisions  |  |
| CATEGORY 2 - BLOOD CONDI   | TIONS  |  |  |  |
| (2A) Significant anaemia or blood loss   | Hb less 8.0g/dl, due to recent (within 72 hours) and active bleeding                               | Chronic disease* and compensated at or above 7.0g/dl (*pathology must be specified e.g. renal failure) | If acutely anaemic Hb level must be assessed at least 24 hours after last known blood loss and there must have been no further bleeding  |  |
| (2B) Sickle cell disease   | Sickling crisis in previous 9 days   | 10 days and over   | Chronic disease MUST have supplemental oxygen  |  |
| CATEGORY 3 - RESPIRATORY   | CONDITIONS   |  |  |  |
| (3A) Pneumothorax (collapsed lung) occurring spontaneously or as a result of chest trauma  Within 6 days of full lung expansion confirmed on chest x-ray in expiration   |  | Within 7-14 days of full lung expansion confirmed on chest x-ray in expiration                         | Lung expansion must be assessed by chest X-ray, providing evidence of no air in pleural space and must indicate this confirmation on VAGP-MED-01 Part 3. Does not include pneumothorax resulting from open chest or cardiac surgery where those provisions apply |  |

Effective 04 February 2016

| CODE/<br>MEDICAL CONDITION                                       | UNACCEPTABLE<br>FOR TRAVEL   | MEDICAL CLEARANCE<br>REQUIRED  | COMMENTS  |
|--|--|--|---|
| (3B) Open chest surgery (non-cardiac)                            | Within 10 days of surgery  | Within 11-28 days  | Refer (1E)  |
| (3C) Chronic lung diseases (COPD, emphysema, chronic bronchitis) | Where there has been a significant deterioration within 48 hours OR if there is cyanosis/ high respiratory rate  | Where supplemental oxygen is required during the flight OR if unable to walk 50 metres - at slow pace, without supplemental oxygen OR recent exacerbation in last 7 days   | Supplemental oxygen provisions may also apply. Refer (10B) and Flying with medical conditions on website: http://www.virginaustralia.com/au/en/plan/special-needs-assistance/medical-conditions/  |
| (3D) Asthma  | Recent severe attack within last 48 hours (requiring hospitalisation)  | If requiring 'treater' (bronchodilator) medication is required more frequently than 3 hourly OR recent deterioration within 48 hours of travel; within 48 hours of post discharge from hospital; 'brittle' asthmatics, acute increase in bronchodilator use, recent acute deterioration within 48 hours of intended travel | Must be stable with medication carried on person  |
| (3E) Pneumonia   | If supplemental oxygen is required   |  | Note: Contagious or infectious conditions provisions may also apply. Refer (7A)   |
| (3F) Tuberculosis  | Untreated or in the first two weeks of treatment  Following appropriate DOT treatment and according to WHO guidelines  http://www.who.int/tb/publications/2008/WHO HTM TB 2008.399 eng.pdf |  |   |
| CATEGORY 4 - NERVOUS SYS   | TEM AND PSYCHIATRIC CON  | IDITIONS   |   |
| (4A) Stroke<br>(cerebro-vascular accident)                       | 4 days or less   | 5-14 days if stable  | Must be self-sufficient in regards to<br>Activities of Daily Living (ADLs) and<br>mobility otherwise nurse/carer<br>escort required. If within 2 weeks of<br>CVA should receive supplemental<br>oxygen (Refer to 10B)                               |
| (4B) Transient Ischaemic Attack<br>(TIA)                         | Within 2 days  | Within 3-5 days, provided stable on medical treatment  | Must be stabilised  |
| (4C) Epilepsy/Fitting/<br>Seizures                               | 24 hours or less or unstable   | Within 7 days of last seizure or fit   | Guests who have long-term chronic seizure patterns that are considered 'regularly stable' application will be considered on a case-by-case basis, please contact the Guest Contact Centre for treating medical professionals required documentation |
| (4D) Cranial surgery   | Cranial surgery 9 days or less With  |  | Air travel should not occur if there is any residual air within the cranial cavity, and must indicate this confirmation on VAGP-MED-01 Part 3   |

Effective 04 February 2016

| CODE/<br>MEDICAL CONDITION   | UNACCEPTABLE<br>FOR TRAVEL  | MEDICAL CLEARANCE<br>REQUIRED   | COMMENTS   |
|--|---|---|--|
| (4E) Spinal surgery, (minimally invasive, e.g. microdisectomy)   | 3 days or less  | 4 days with treating sugeon's clearance   | Note: Passengers are required to remain seated at all times while the seat belt sign is illuminated, consideration of the patients' ability to tolerate unavoidable turbulence should be taken.  |
| (4F) Spinal surgery (major invasive, e.g. open decompression)  | 8 days or less following surgery  | 9 days up to 12 weeks of injury or surgery  | Wound should be healing/dry Note: Passengers are required to remain seated at all times while the seat belt sign is illuminated, consideration of the patients' ability to tolerate unavoidable turbulence should be taken. Standard aircraft fitted life jackets may not fit passengers wearing a HALO brace - carriage of own device should be taken |
| (4G) Significant psychiatric conditions  | If unstable OR likely to deteriorate during flight/result in harm to crew/other passengers OR if sedated to the point that self-care is not possible OR if condition is likely to require active medical intervention during the flight | Currently stable but where there has been a significant deterioration or hospitalisation within 14 days* The nature of such deterioration must be detailed, along with response to treatment and date of last intervention required | * The certifying medical practitioner should consider the possible stress of travel on the individual  |
| (4H) Head injury associated with loss of consciousness or skull fracture  Within 2 days, if there has be fitting                                       |   | Within 10 days of injury or fit   | Exception (4C) No evidence of pnemocranium or current CSF leak - must indicate this confirmation on MED-01 Part 3.   |
| CATEGORY 5 - GASTRO-INTES  | STINAL CONDITIONS   |   |  |
| (5A) Acute infections such as<br>gastro-enteritis and<br>Hepatitis A   | While there is a risk of transmission to other passengers or crew (whether as a result of active infection or possible infectious incubation)   | While still showing symptoms, if<br>the condition is no longer<br>infectious and incubation period<br>has passed  | See also contagious or infectious condition. Refer (7A)  |
| (5B) Open abdominal surgery (e.g. Laparotomy, Appendicectomy, Hysterectomy, Cholecystectomy, Hepatectomy, Colectomy, Caesarean, Radical Prostatectomy) | Within 10 days  | Within 11-14 days or if complications persist   | Open surgery means through a full incision and not laparoscopic or 'keyhole' surgery   |
| (5C) Laparoscopic/Laprascopic<br>Prostatectomy (or 'keyhole'<br>surgery of the abdomen)  | 4 days or less  | Only required if complications occurred or within 10 days if anastomosis was performed  | All gas must be absorbed.  |
| (5D) Diagnostic Laparoscopy  | Less than 24 hours  | 1-4 days following procedure  | All gas must be absorbed   |
| (5E) Significant gastro-intestinal bleeding  | Within 48 hours   | Within 3-10 days, provided the bleeding has stopped   | Note: Blood Conditions: anaemia<br>and blood loss criteria might also<br>apply and will override these<br>provisions (refer to section 2A)   |

Effective 04 February 2016

|  | UNACCEPTABLE<br>FOR TRAVEL  | MEDICAL CLEARANCE<br>REQUIRED  | COMMENTS  |  |  |  |  |  |
|--|---|--|---|--|--|--|--|--|
| CATEGORY 6 - EYE, EAR, NO  | CATEGORY 6 - EYE, EAR, NOSE AND THROAT CONDITIONS   |  |   |  |  |  |  |  |
| (6A) Penetrating eye injury, retinal detachment or hyphaema (bleeding into the front of the eye)   | Within 6 days   | Within 7-21 days and must be provided by an ophthalmologist (eye surgeon)                        | Does not include removal of a foreign body from the cornea. Any gas in globe must be reabsorbed |  |  |  |  |  |
| (6B.1) Intraocular surgery WITH gas  | Within 7 days or while there is any air or gas within the globe   | Within 8-42 days   | Any gas injected into the globe must be absorbed prior to travel                                |  |  |  |  |  |
| (6B) Intraocularsurgery WITHOUT gas admixture (e.g. oil only)  | Within 24 hours   | Within 2-14 days and must be provided by the treating surgeon (ophthalmologist)                  |   |  |  |  |  |  |
| (6C) Cataract surgery  | Within 24 hours   | Within 1-3 days and must be provided by the treating surgeon (ophthalmologist)                   |   |  |  |  |  |  |
| (6D) Corneal laser surgery   | Within 24 hours   | 1-3 days   |   |  |  |  |  |  |
| (6E) Severe otitis media (middle ear infection)  | While the eustachian tube is blocked  |  | Must be able to clear ears  |  |  |  |  |  |
| (6F) Severe paranasal sinusitis  | While the sinus is obstructed   |  |   |  |  |  |  |  |
| (6G) Inner or middle ear surgery   | Within 9 days   | Within 10-21 days and must be provided by the treating ENT surgeon (Otolaryngologist)            | Includes the insertion of a cochlear implant  |  |  |  |  |  |
| (6H) Insertion of grommets   |   |  | Refer (10A) Anaesthetics  |  |  |  |  |  |
| (6I) Fractured jaw<br>(surgically wired)   | Without an escort carrying appropriate cutters  | Travel can be permitted without an escort or cutters, if quick self-release wiring has been used |   |  |  |  |  |  |
| (6J) Dental procedures<br>(e.g. root canal, extractions,<br>implants)  | Within 24 hours   |  | Ensure adequate analgesia   |  |  |  |  |  |
| CATEGORY 7 - CONTAGIOUS  | OR INFECTIOUS CONDITIONS  |  |   |  |  |  |  |  |
| (7A) Includes, but is not confined to:     Varicella ('chicken pox'),     Herpes zoster ('shingles'),     Hepatitis A, Gastroenteritis,     Measles, Mumps, Rubella     ('German measles'),     Pneumonia, Meningitis,     Pertussis ('whooping cough'),     Tuberculosis [TB])* | While there is a risk of transmission to other passengers or crew (whether as a result of active infection or possible infectious incubation) |  | The incubation period of the particular<br>lness should be considered                           |  |  |  |  |  |

Effective 04 February 2016

|  | JNACCEPTABLE<br>FOR TRAVEL   | MEDICAL CLEARANCE<br>REQUIRED   | COMMENTS   |  |
|--|--|---|--|--|
| CATEGORY 8 - ORTHOPAEDIC                                   | S  |   |  |  |
| (8A.1) Fractures - Upper Limb                              | Can travel after 24hours following injury if no neurovascular compromise   | Within 7 days   | No requirement to split cast   |  |
| (8A.2) Fractures - Lower Limb                              | Encircled cast of LEG must be split if applied within 48 hours prior to travel   | Within 7 days   | <b>Note:</b> Anaemia and DVT criteria might also apply and will overrule these provisions  |  |
| (8B) Arthroscopic joint surgery                            | Less than 24 hours   |   | Consider mobility assistance   |  |
| (8C) Large joint replacement surgery (hip, knee, shoulder) | Less than 7 days unless<br>uncomplicated single joint<br>surgery and approval sought<br>after operative details provided<br>to Guest Contact Centre  | From 7 days and must be provided by the treating orthopaedic surgeon or senior deputy   | Consider DVT prophylaxis. Mobility criteria may also apply and will overrule these provisions  |  |
| CATEGORY 9 - PREGNANCY A                                   | ND NEWBORN   |   |  |  |
| (9A) Pregnancy Flights greater than 4 hours                | ights greater than 36 <sup>th</sup> week con   |   | Risk of labour must be minimal.  Note: After 28 <sup>th</sup> week of pregnancy every passenger must carry at all times, a letter dated no more than 10 days prior to travel from a doctor, or midwife outlining the following:  Estimated date of confinement  Single or multiple pregnancy  Absence of complications  Fitness to fly for duration of flight booked |  |
| (9A.1) Pregnancy<br>Flights less than 4 hours              | <ul> <li>Single pregnancy - after the 38<sup>th</sup> week</li> <li>Multiple pregnancy - after the 36<sup>th</sup> week</li> <li>Within 48 hours delivery Normal Vaginal Delivery (NVD)</li> </ul> | Any pregnancy with complications will require a medical clearance     Within 5 days of normal vaginal delivery (exclusion caesarean refer 5B) | Risk of labour must be minimal.  Note: After 28 <sup>th</sup> week of pregnancy every passenger must carry at all times, a letter dated no more than 10 days prior to travel from a doctor, or midwife outlining the following:  Estimated date of confinement  Single or multiple pregnancy  Absence of complications  Fitness to fly for duration of flight booked |  |
| (9B) Infancy   | Infants less than 48 hours old OR requiring an incubator or ventilator   | Infants less than 7 days old, or with history of complications at birth or premature delivery   | Risk of hypoxia if respiratory system not yet fully developed  |  |
| (9C) Miscarriage (threatened or complete)                  | While there is active bleeding   | Within 7 days of bleeding   | Must be stable, no bleeding and no pain for at least 24 hours  |  |

Effective 04 February 2016

|   | INACCEPTABLE<br>OR TRAVEL   | MEDICAL CLEARANCE<br>REQUIRED   | COMMENTS   |  |  |  |  |
|---|---|---|--|--|--|--|--|
| CATEGORY 10 - OTHER CONDITIONS AND PHYSIOLOGICAL STATES   |   |   |  |  |  |  |  |
| (10A) Anaesthetics - general  | ≤ 24 hours of having a general anaesthetic                          | ≥24 hours of having a general anaesthetic where medical condition contraindicates travel within this time  Refer to specific medical conduction guidelines to determine fith travel   |  |  |  |  |  |
| (10B) Supplemental oxygen required  |   | Medical clearance always required; medical practitioner can stipulate that clearance is valid for 6 months from date of issue, unless there has been a recent acute exacerbation or hospital admission for a directly related complaint. Please see additional information about oxygen | Note: Other provisions might also apply depending upon the condition for which oxygen is required. Refer to Flying with medical conditions – Supplementary Oxygen on website: http://www.virginaustralia.com/au/en/plan/special-needs-assistance/medical-conditions/   |  |  |  |  |
| (10C) Breast surgery (including augmentation or reduction procedures)   | Less than 24 hours  | Within 2-4 days   | Ensure adequate self-administered analgesia  |  |  |  |  |
| (10D) Plastic surgery of the superficial soft tissues, muscles and skin   | Less than 24 hours  |   | Ensure adequate self-administered analgesia  |  |  |  |  |
| (10E) Introduction of air or other gases to the body cavities for diagnostic or therapeutic purposes (e.g. facit joint blocks, laparoscopy) | Less than 24 hours  | Within 7 days   |  |  |  |  |  |
| (10F) CAPD (Continuous Ambulatory<br>Peritoneal Dialysis)   |   | May travel if clinically stable<br>and Hb>8.0g/L. Should travel<br>with additional CAPD fluid bags<br>in case of delays   | Must have doctor's letter to present to airport security upon demand   |  |  |  |  |
| (10G) Anaphylaxis/allergies (severe, or even life-threatening)  |   | For passengers who believe they have this condition but are not in possession of appropriate medication for treatment, a letter or management plan from their medical practitioner will be required   | Passengers must be at a low risk of a reaction onboard. Virgin Australia cannot guarantee the airline environment or food will be free of specific allergens. If a passenger is carrying an auto injector device (e.g. EpiPen), they must ensure it is in their carry-on luggage and that they or an escort/carer/companion, are willing and capable of administration if required |  |  |  |  |
| (10H) Scuba Diving  | Within 24 hours of the last dive                                    | Not required after 24 hours unless recent decompression sickness  |  |  |  |  |  |
| (10K) Decompression sickness  | Within 3 days for the bends<br>7 days with neurological<br>symptoms | Within 4-7 days  Medical clearance MUS provided by a specialist hyperbaric medicine   |  |  |  |  |  |

#### medical clearance guidelines

Effective 04 February 2016

| CODE/<br>MEDICAL CONDITION                                       | UNACCEPTABLE<br>FOR TRAVEL  | COMMENTS       |  |  |  |  |  |
|--|---|----------------|--|--|--|--|--|
| CATEGORY 10 - OTHER CONDITIONS AND PHYSIOLOGICAL STATES          |   |                |  |  |  |  |  |
| (10L) Terminal or serious<br>illness, not otherwise<br>specified | If significant deterioration or incapacitation is likely to occur during the flight, OR if condition is likely to require active medical intervention during flight |                | Other provisions may also apply including a medical escort/retrieval team                                  |  |  |  |  |
| (10M) Extensive burns or wounds                                  | Where the wounds are extensive and might permit seepage of blood or tissue fluid during the flight  |                | Consideration should be given to wounds on pressure sensitive surfaces such as the buttocks, feet and back |  |  |  |  |
| (10N) Transurethral<br>Resection of the<br>Prostate (TURP)       | <48 hours   | Up to 72 hours |  |  |  |  |  |
| (10O) Thyroidectomy/<br>Hemithyroidectomy                        | <48 hours   | Up to 5 days   |  |  |  |  |  |

#### **NOTE: AT TIME OF TRAVEL**

If a passenger presents physically ill (e.g. vomiting or requiring first aid oxygen) in the terminal area or while boarding the aircraft, or presents other symptoms which create a reasonable concern that the passenger may not be able to complete the flight safely, the passenger may be denied boarding and not be permitted to travel until medical clearance is obtained.

Effective 04 February 2016

#### Part 3 - Medical Clearance Form

| 1. PEF   | 1. Personal Information                          |                |          |                        |        |                     |         |                        |
